**University Hospital Cologne
European Confederation of
Medical Mycology
ECMM Excellence Center**

Dear Reader,

We are pleased to present you the ECMM 2017-2021 Report.

The European Confederation of Medical Mycology (ECMM) was instituted at the Institut Pasteur in Paris, France, in 1993. The purpose of the confederation is to foster science and research, to coordinate scientific and clinical activities and to organize mycology conventions and training programs. As the umbrella organization of the European mycological entities and with a global Academy and Excellence Center Initiative in place, the confederation continues to join forces for all scientists interested in human and veterinary medical issues related to mycology.

In order to make it easier to locate mycology experts, the European umbrella organization of the 27 national mycological societies designates European Centers of Excellence. Here in Cologne, such a center was opened with an inaugural symposium at the University Hospital in October 2017. Our working group consists of specialists from various disciplines who work together very closely in diagnosis and therapy. In this report we would like to introduce you to the breadth of our work and our main projects in Cologne.

Much of ECMM's work focuses on standardizing diagnostics and treatment and developing guidelines. By doing so, we thrive to ensure that patients receive the best possible treatment. It is also our goal to allow for conditions that specifically differ by country or region and to support improvements also in Africa, Asia and Latin America. The ECMM Consulting Service, various networks and the EQUAL Scores offer opportunities for prompt and tangible help. We do research in various areas, conduct clinical trials and adapt our research agenda to current or upcoming needs as illustrated by our studies on COVID-19 associated mycoses.

The YoungECMM program is expected to provide a global community for scientists early in their careers. This will ensure the future of the confederation through attracting new talent working in human and veterinary medical mycology. We are proud to actively support the foundation of the YoungECCM program.

In order to share new information on our activities and to disseminate results, we use a variety of social media channels to reach a large audience. We provide a wide range of videos on scientific topics via our own YouTube channel IDIM and our account on the Chinese portal YouKu. Through the FungiScope® Twitter channel, we easily share news and publications.

There is a substantial amount of positive feedback and inquiries related to our work. We feel encouraged to continue to do our best.

Cologne, December 2021

FungiScope®

"FungiScope® and its partners contributed substantially to the development of global clinical guidelines."

Danila Seidel, PhD

FungiScope® is an ECMM Working Group and a well established registry for invasive fungal infections, having been active for 18 years with partners in 85 countries. FungiScope® is designed to provide advice to clinicians and to investigate the global epidemiology of fungal infections.

The ethics approval was renewed in 2019 to include *Aspergillus* and *Candida* infections, which now enables including all invasive fungal infections except for endemic mycoses. The data quality is assured by the central FungiScope® team of scientists and infectious disease specialists who validate all cases and resolve queries with the respective contributor. Only complete cases are accepted into the registry. If available, the clinical fungal isolate is stored in the Cologne biobank for research purposes including centralized pathogen (re-)identification, and susceptibility testing. If international material shipment is restricted for any reason, it may be sent to one of the FungiScope® regional labs. Currently, there are regional laboratories participating in 6

countries, which are Australia, China, the Czech Republic, India, Russia, and Spain.

To date, approximately 1,700 cases of infections due to rare fungal pathogens are included in the registry, 10% with mixed infections. In addition, >400 *Aspergillus* and >900 *Candida* infections were enrolled.

With the currently ongoing SARS-CoV-2 pandemic, a new field of research has emerged. In FungiScope®, COVID19-associated fungal infections are collected to investigate the role of SARS-CoV-2 as a novel predisposing factor for fungal infections. Suitable diagnostic and therapeutic strategies are being identified.

Within the FungiScope® network, analyses are accomplished in a joint effort involving those who contribute the respective cases. Analyses on the epidemiology of rare fungal infections,¹⁻¹⁰ and treatment strategies^{11,12} were published in the past four years. FungiScope® and its partners contributed substantially to the development of global clinical guidelines.¹³

Currently enrolling campaigns are as follows:

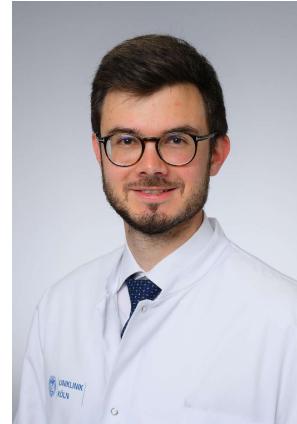

Rare Moulds and other emerging fungi

With an increasing number of patients at risk for fungal infections, formerly rare fungal infections are becoming a noticeable health care problem around the world. Treatment is challenging due to intrinsic resistance to several or in some cases all currently available antifungal agents. The epidemiology of those rare fungal infections and geographical differences are not comprehensively understood. Therefore,

infections caused by rare moulds and other rare fungal pathogens are a main focus of research. Clinical data are collected that provide a more detailed overview on diagnostic and therapeutic challenges in different patient populations.^{1,2,14,15} The focus is manifold, e.g., the efficacy of certain treatment modalities is investigated as well as specific patient groups at risk are considered for sub-analyses to guide patient management and eventually improve outcomes.

Aspergillus

“Cases of invasive aspergillosis [...] have been increasingly noted over the past years around the world [...].”

Jannik Stemler, MD

1. Clinical implications of azole-resistant aspergillosis in hematological malignancy (CLARITY):

Cases of invasive aspergillosis caused by azole-resistant pathogens have been increasingly noted over the past years around the world but little information is available on how azole resistance affects clinical management and patient outcome.¹³ To investigate the clinical impact of azole-resistance, patients with invasive infection caused by azole-resistant or azole-susceptible *Aspergillus* were enrolled. Cases from 19 countries were included. The clinical isolates are available for centralized confirmation of the pathogen, susceptibility testing and sequencing for 25% of cases.

Initiated: 01/2017
250/250 enrolled.

2. Evaluation of serum galactomannan as a prognostic marker for clinical response:

In galactomannan positive invasive aspergillosis, the course of the galactomannan optical density index during treatment is being analyzed to support a new biomarker response tool in these patients.

Initiated: 10/2019
140/200 enrolled.

3. Clinical implications of non-*fumigatus* aspergillosis:

Clinical course of non-*fumigatus* aspergillosis will be investigated to determine the clinical implications of these infections compared to *A. fumigatus* infections. The aim is to include 100 clinical cases to cover a wide range of the heterogeneous patient population at risk for fungal infections.

Initiated: 10/2019
30/100 enrolled.

Candida

"Even short treatment delays are associated with higher mortality rates."

Philipp Köhler, MD

Invasive *Candida* infections represent an increasing threat to patients and healthcare systems alike. Even short treatment delays are associated with higher mortality rates. Epidemiological shifts towards more resistant *Candida* spp. require diligent surveillance. The trigger to set up the ECMM *Candida* III (Lead: Prof. M. Hoenigl) registry was the emergence of *Candida auris* and the rising antifungal resistance rates in common species, for example of *C. parapsilosis*. ECMM *Candida* III is an online platform looking for international cooperation in order to improve and promote research regarding invasive *Candida* infections. Data is

collected via the General Data Protection Regulation compliant data platform ClinicalSurveys.net, the host software for the electronic case report forms (eCRF) of FungiScope®.

ECMM *Candida* III can be used for a variety of studies from cohort studies on attributable mortality to evaluations of guideline adherence (→ ECMM EQUAL Scores), offering the investigators of all ECMM member countries the opportunity to document and share their cases of invasive *Candida* infection. This platform also enables the monitoring of epidemiology of invasive *Candida* infections, including monitoring of outbreaks.

Antifungal Resistance: From Surveillance to Treatment (AReST) - A French-German International Study

"Information on antifungal resistance is actually not available and remains in urgent demand."

Candida glabrata is the second most-common bloodstream *Candida* species isolated in Europe and North America. This yeast has an intrinsically low susceptibility to fluconazole, with 10–30% of *C. glabrata* isolates harbouring high fluconazole MICs (MIC >32 mg/L). The prevalence of echinocandin resistance varies depending on the geographical location, with Europe showing lower rates (0–9%) compared to the rates of 0–25% in the USA. The emergence of resistant fungi in France and Germany has

Laman Rahimli, MD

been described in few studies, generally restricted to single centres. In Germany, this lack of surveillance programs is pressing. Hospital data are available via the Diagnosis-Related Groups Statistic (DRG), but this provides only limited amount of clinical information for research purposes. Information on antifungal resistance is actually not available and remains in urgent demand to allow healthcare practitioners and policy makers to make the right decisions in the future.

CPAnet

"Chronic pulmonary aspergillosis complicates a wide spectrum of underlying lung disease."

Danila Seidel, PhD

Rosanne Sprute, MD

Chronic pulmonary aspergillosis complicates a wide spectrum of underlying lung disease of which the most common conditions are pulmonary tuberculosis (PTB), non-tuberculous mycobacterial lung infection, COPD, sarcoidosis, and allergic aspergillosis complicating asthma. CPA can present as an overlap of several forms, which complicates a one-fits-all diagnostic approach. Patients with aspergilloma or other forms of CPA may be asymptomatic and diagnosis is made incidentally. If clinical symptoms are present, they are usually nonspecific and often resemble symptoms seen in underlying conditions.

In 2017, the CPA Research Network (CPAnet) was founded with the contribution of ECMM EC Cologne members. The goal is to broaden the knowledge on the spectrum of diseases combined as CPA. A global registry for centralized collection of clinical cases was launched in 2018.¹⁵ The registry is

maintained by the ECMM EC Cologne team. It runs without an endpoint and allows retrospective and prospective case entries. A follow-up of at least 10 years for each patient is intended. Intermittent updates on treatment and response are requested at 6 months and two years after diagnosis of CPA for prospectively enrolled subjects. CPAnet and thus the registry is open to everyone who is interested in researching CPA. Within the growing network first results have been published in a joint effort, presenting risk factors and diagnosis of 74 CPA cases.¹⁶ Utilizing the worldwide collaborative network of the ECMM, CPAnet and the registry would like to invite additional reference centers to become an active partner of CPAnet. This will help to increase the number of patients needed in order to comprehensively investigate diagnostic strategies and to formulate therapeutic options in CPA.

The Global Guideline Program – One World One Guideline

“Prevalence of invasive fungal infections is on the rise.”

Prof. Oliver A. Cornely, MD

In the context of a growing population of immunocompromised patients at risk for opportunistic infections, prevalence of invasive fungal infections is on the rise. While new diagnostic and therapeutic options are now available to tackle invasive fungal infections, up-to-date guidance for the correct use in the clinical setting is urgently needed. Against that background, ECMM

has embarked on an unprecedented orphan diseases guidance initiative to connect professionals worldwide (Figure 1) and to develop a global guidance for diagnosis and management of invasive fungal infections. So far, five guidelines have been published, with an anticipated publication of the guidelines for *Cryptococcosis* and *Candida* diseases in 2022.

Year of publication	Guideline
2019	Mucormycosis (with MSG-ERC)
2020	CAPA (adapted methodology)
2021	Rare Moulds Endemic Mycoses Rare Yeast
~2022	<i>Cryptococcus</i> <i>Candida</i>
~2023	<i>Aspergillus</i>

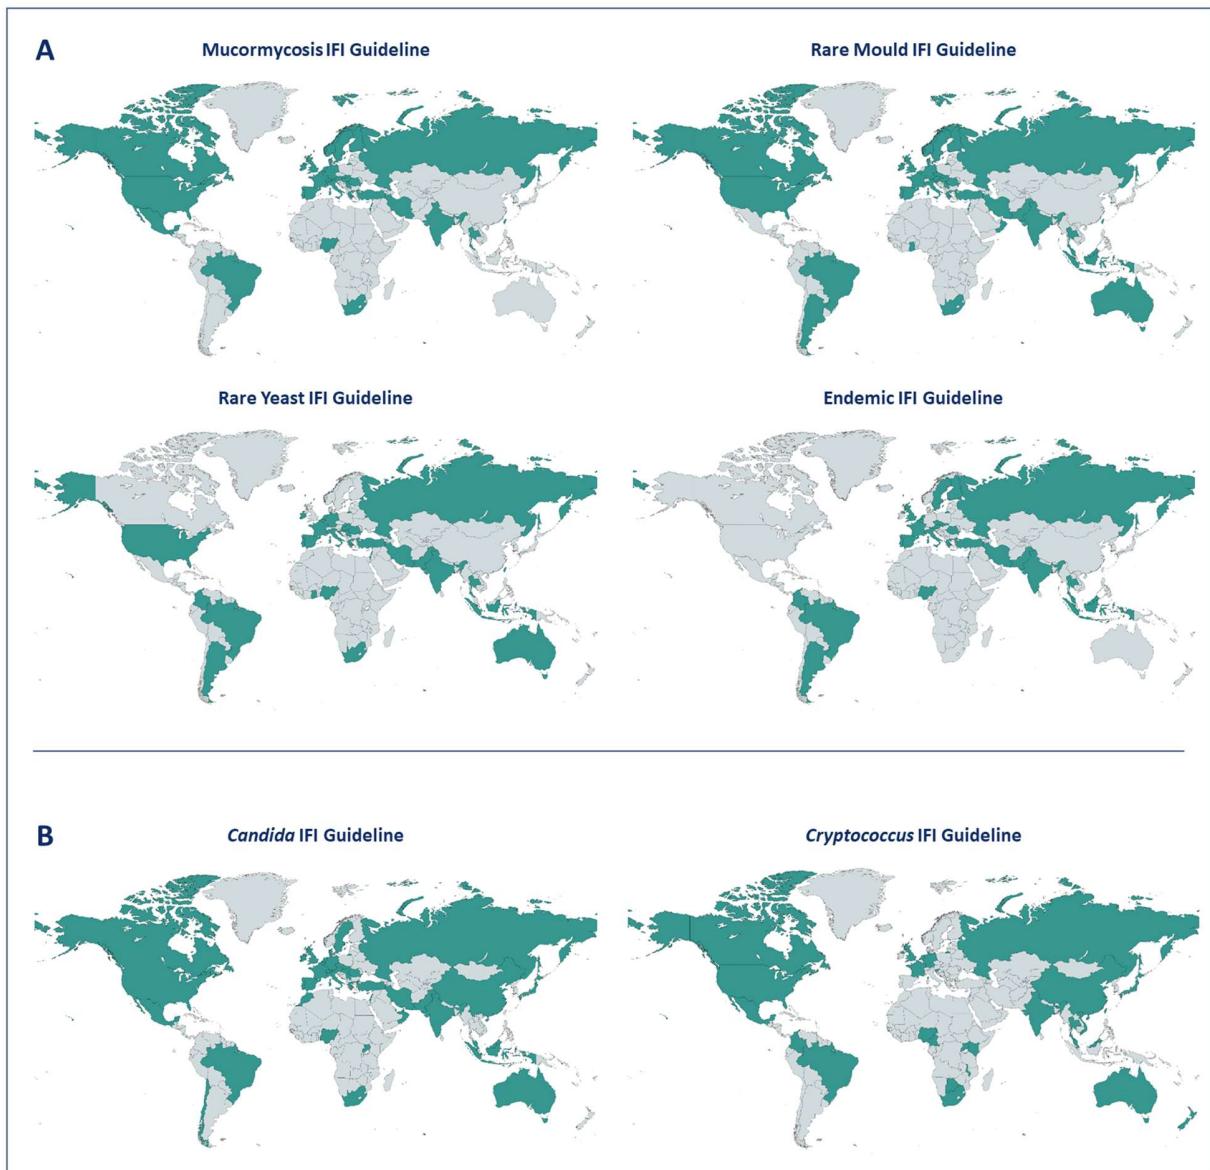

Figure 1: One World One Guideline Project.

A. World maps displaying countries that endorse the guidelines on Mucormycosis, Rare Mould Infections, Rare Yeast Infections, and Endemic Mycoses. Colored regions indicate countries where scientific societies endorsed the respective guideline.

Mucormycosis: 53 scientific societies from 34 countries; Rare Mould IFI: 55 scientific societies from 39 countries; Rare Yeast IFI: 45 scientific societies from 32 countries; Endemic IFI: 36 scientific societies from 28 countries.

B. World maps of countries that contribute to the *Candida* and *Cryptococcus* IFI guidelines (currently under development). Countries highly in color indicate contributors or authors of these guideline projects. *Candida* IFI: 104 authors and contributors from 46 countries; *Cryptococcus* IFI: 62 authors and contributors from 28 countries.

Local Structures, Diagnostic and Treatment Algorithms

“Two algorithms [...] have been implemented throughout the University Hospital of Cologne.”

Philipp Köhler, MD

To enable structured and uniform diagnostic and treatment strategies we implemented two algorithms which have been implemented throughout the University Hospital of Cologne.

1) Management Pathway “Febrile Neutropenia”

The ECMM EC of the University Hospital of Cologne provides a diagnostic and treatment algorithm for patients with febrile neutropenia which is constantly updated according to evidence from the literature. The most recent update is from June 2021 and can be found in English DOI 10.4126/FRL01-006419168 and German 10.4126/FRL01-006415278.

2) Management Pathway “Mucormycosis”

Due to the highly complex clinical management of mucormycosis, a separate diagnostic and treatment pathway has been developed in 2020, the most recent update dates from May 2021 and is available in German language (DOI 10.4126/FRL01-

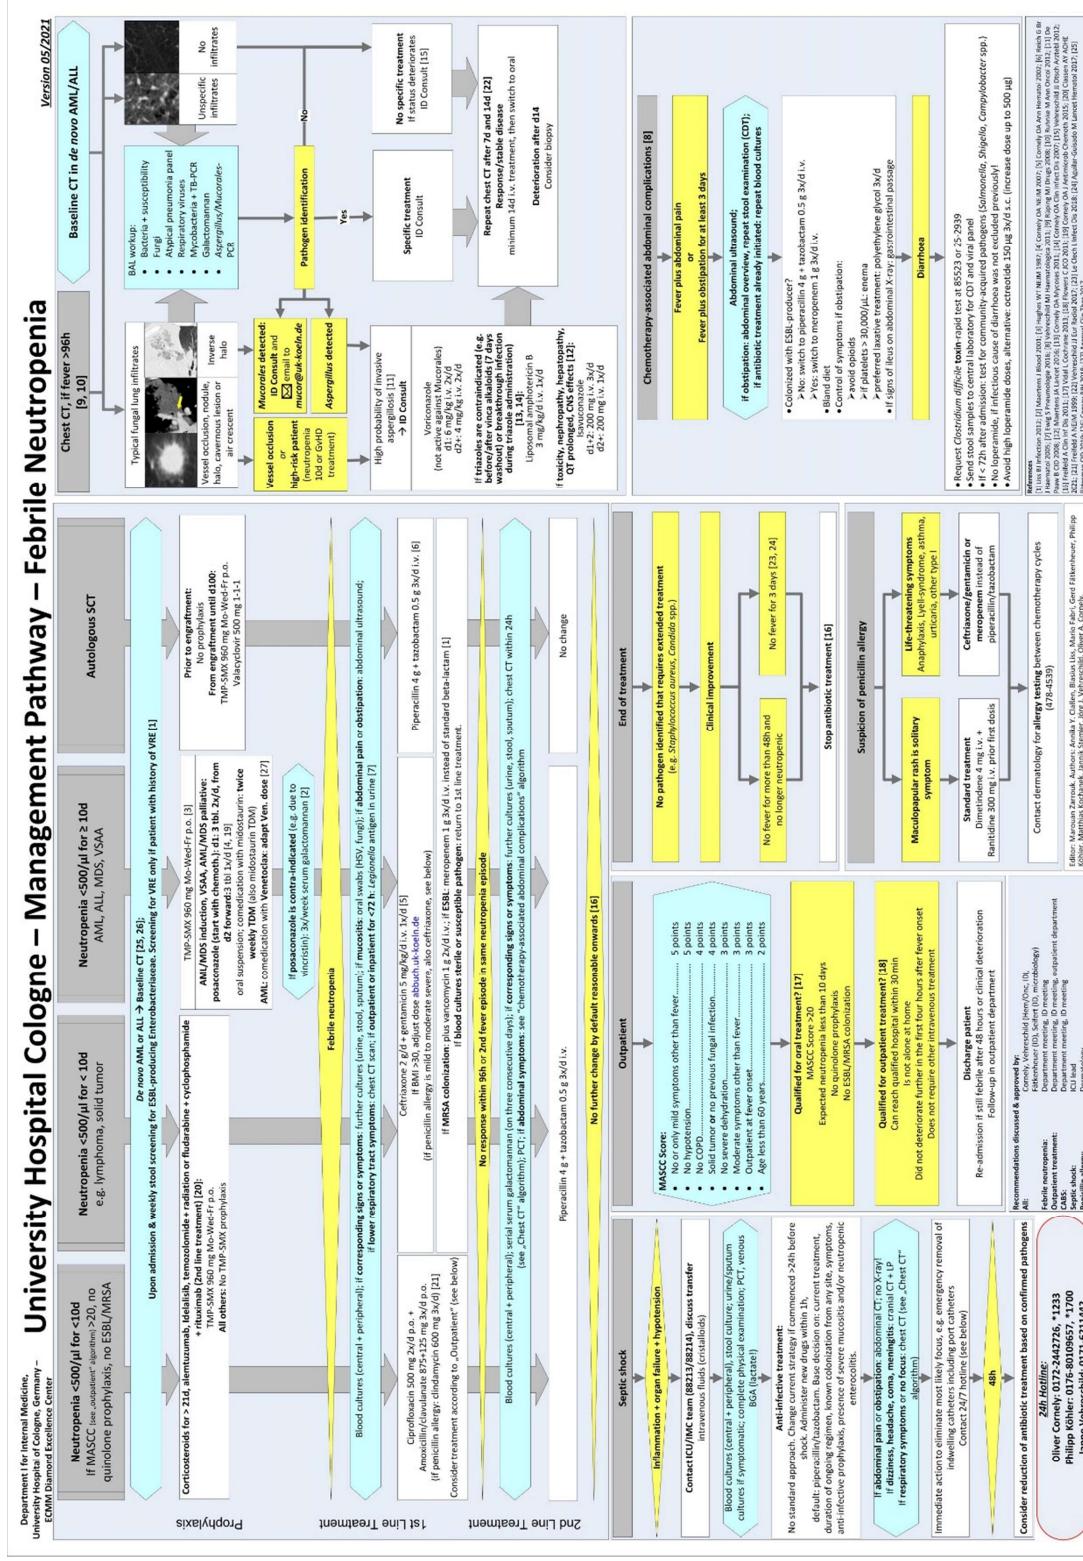

006427997 and English 10.4126/FRL01-006428487).

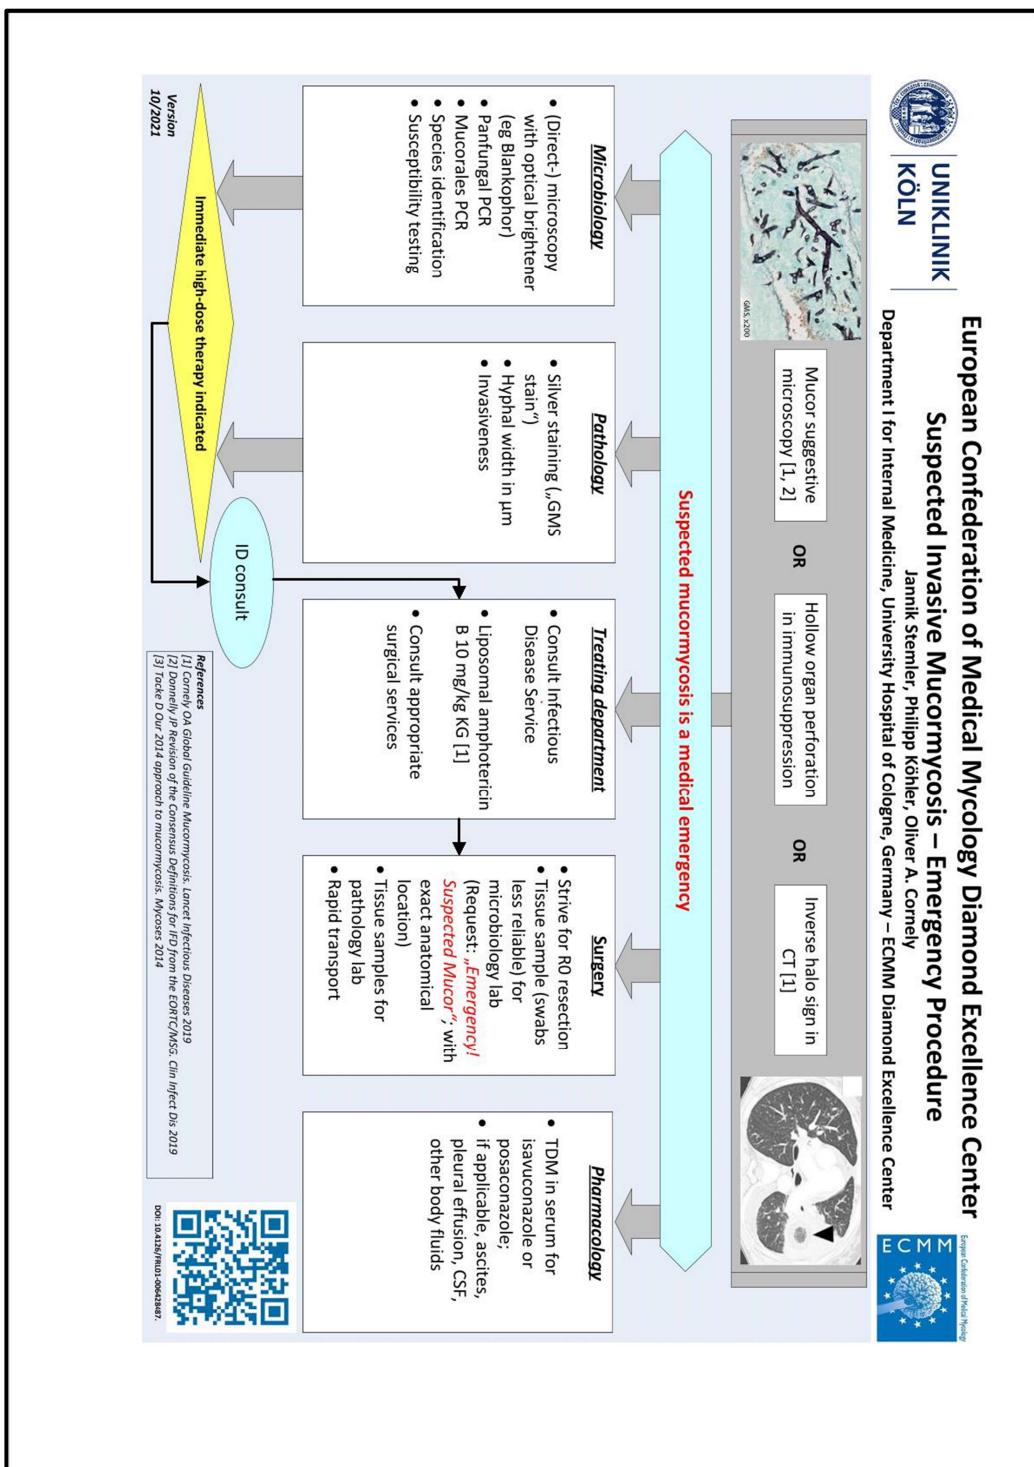

With the presence of a multidisciplinary group in charge of managing fungal infections (comprised of infectious diseases specialists, microbiologists, pathologists, clinical pharmacologists, radiologists, ENT surgeons and visceral and thoracic surgeons) immediate expertise for treatment of complicated fungal infections is available 24/7 at our hospital.

Standard therapeutic drug monitoring is offered with a validated LC-MS/MS method for

- Isavuconazole
- Itraconazole
- OH-Itraconazole
- Posaconazole
- Voriconazole

and a defined standard of care with the treatment algorithms provided below. Echinocandin TDM is planned to be established for clinical routine.

For a better view, both graphs can also be found as **annexes** at the beginning of the report.

Antifungal Prophylaxis in Acute Myeloid Leukaemia treated with Novel Agents

"In a joint venture [...] the Cologne ECMM EC develops a guideline on antifungal prophylaxis in recipients of immunomodulators or novel antineoplastic drugs [...]."

Triazole based antifungal prophylaxis in acute myeloid leukaemia (AML) has become more complex: novel targeted AML therapies¹⁷ interact with CYP3A4 inhibition of triazoles which results in higher exposure of those novel therapies and potentially increased toxicity. At UHC, we established a LC-MS/MS TDM method for midostaurin, a novel FLT3-tyrosine kinase inhibitor for patients with FLT3-positive AML. Currently, we are performing a prospective clinical observational trial in AML patients who receive both triazoles and midostaurin with twice weekly plasma level measurements to assess the interaction potential and interaction-related toxicity. First results are expected in 2022. Furthermore, we aim to establish TDM methods for other novel targeted therapies in the treatment of AML such as gilteritinib, ivosidenib, sorafenib, and

Jannik Stemler, MD

venetoclax among others. In a joint venture with the European Hematology Association (EHA) the Cologne ECMM EC develops a guideline on antifungal prophylaxis in recipients of immunomodulators or novel antineoplastic drugs.

Prospective studies have determined the diagnostic and prognostic value of baseline chest computed tomography (BCT) in patients with *de novo* acute leukaemia to detect invasive fungal disease (IFD) early. BCT has become a standard-of-care in hematology centres.¹⁸ Since June 2019, BCT is routinely performed at University Hospital of Cologne. We aim to retrospectively assess all patients with *de novo* acute leukaemia who received BCT to determine incidence of IFD at diagnosis and to assess prognosis and outcome of these patients.

EQUAL Scores

"To date, the ideal diagnostic and therapeutic approach to IFIs is difficult to achieve."

Prof. Oliver A. Cornely, MD

Invasive fungal infections (IFIs) pose substantial threats for haematological malignancy patients. To date, the ideal diagnostic and therapeutic approach to IFIs is difficult to achieve. Clinicians may avoid invasive diagnostic and treatment algorithms in a seriously ill patient. Laboratory-based mycologists may not receive the appropriate samples and pathologists may not receive any sample at all, since invasive procedures are precluded. Recent clinical guidelines on the management of IFIs recommend multiple diagnostic and therapeutic decisions, reflecting the extraordinary complexity. When IFIs are suspected in a given patient, it

may appear unlikely that all the provided recommendations from guidelines are available at hand for clinicians. Moreover, it is unknown to what extent clinicians adhere to current guidelines and whether mortality is linked to avoiding invasive diagnostic procedures or whether guideline adherence affects outcomes at all. We developed a total of 84 scores for four different manifestations of invasive fungal infections (Aspergillosis, Candidemia, Cryptococcosis & Mucormycosis) to quantify guideline adherence. A fifth EQUAL Score for Scedosporiosis/Lomentosporiosis has been accepted for publication.¹⁹

EQUAL Candida Score 2018: An ECMM Score Derived From Current Guidelines to Measure QUAlity of Clinical Candidemia Management

Mellinghoff SC^{1,2}, Rutz J¹, Köhler P^{1,2}, Cornely OA^{1,2}

¹ Department I for Internal Medicine, Excellence Center for Medical Mycology (ECMM), University of Cologne, Germany, ² CECAD Cluster of Excellence, University of Cologne, Germany. DOI: 10.4126/FRLO1-006411743

Background
The EQUAL Candida Score weighs and aggregates factors recommended for the ideal management of candidemia and provides a tool for antifungal stewardship as well as for measuring guideline adherence. Current guidelines provided by the European Society for Clinical Microbiology and Infectious Diseases^{4,5} and by the Infectious Diseases Society of America⁶ were reviewed and the strongest recommendations for management quality selected as basis for this scoring tool.

PACIFIC – ImPACT on Invasive Fungal Infections by Immune Checkpoint Inhibition

"Results will serve to better understand the role of immune checkpoints in fungal infections."

Sibylle Mellinghoff, MD

Based on preclinical studies, there is significant evidence for immunosuppression as a detrimental factor during invasive fungal infections (IFI). Targeting immune checkpoints which may reverse hyporesponsiveness of the innate and adaptive immune system during IFI could be of benefit for these patients. However, any such therapy needs to be individualized based on the immune status of each patient. The first patient treated with an immune checkpoint inhibitor for fungal infection was reported in 2017. A benefit of immune checkpoint inhibitors in fungal infections other than mucormycosis can be assumed, but needs further investigation.

While Spec *et al.* have already reported an increased level of PD1-expression on T-cells during candidemia, this was only a small subset of patients (n=27) and a correlation between PD1-expression level and outcome

was missing. In addition, checkpoint expression in the microenvironment of ICI would be of utmost interest. We therefore conduct a prospective observational trial exploring immune checkpoint expression levels in IFI. Results will serve to better understand the role of immune checkpoints in fungal infections. A subsequent clinical trial may evaluate the administration of immune checkpoint inhibitors in selected patients with IFI in the future.

Within the project, we have collected 24 samples from patients with candidemia and 22 samples from patients with invasive aspergillosis. A sample collection from patients with mucormycosis is ongoing. Analyses are currently in progress. In addition, we have successfully treated a mucormycosis patient with nivolumab.²⁰

Clinical Trials at the ECMM EC Cologne

Since January 2017 a total of 9 clinical trials have been initiated at the ECMM EC Cologne with a total of 46 patients being included in those Phase I to III trials. Currently, 6 clinical trials are actively recruiting at the ECMM EC Cologne. Furthermore, active support and trial lead of studies endorsed by the ECMM is

provided. The Director and the Deputy Director of the Cologne ECMM EC serve on several Data Review Committees, Data Safety Monitoring Boards or as Principal Investigators, and National or International Study Coordinators of the below mentioned trials.

Study title	Recruitment period at ECMM EC Cologne
A Phase 3 Randomized Study of the Efficacy and Safety of Posaconazole versus Voriconazole for the Treatment of Invasive Aspergillosis in Adults and Adolescents (Phase 3; Protocol No MK-5592-069) P06200	Oct 2013 - Feb 2020
Open-Label Study to Evaluate the Efficacy and Safety of SCY-078 in Patients with Fungal Diseases that are Refractory to or Intolerant of Standard Antifungal Treatment (FURI) FURI (SCY-078-301)	Since Oct 2017
An Open Label, Multicenter Study to Determine the Safety and Pharmacokinetics of Intravenous and Oral APX001 in Patients Undergoing Chemotherapy for Acute Myeloid Leukaemia with Neutropenia APX001-103	Oct 2017 - Jan 2019
An Open-Label Study to Evaluate the Efficacy and Safety of APX001 in Non-Neutropenic Patients with Candidemia, with or without Invasive Candidiasis, Inclusive of Patients with Suspected Resistance to Standard of Care Antifungal Treatment APX001-201	Mar 2019 - Apr 2020
A Multicenter, Randomized, Double-Blind Study to Evaluate the Safety and Efficacy of the Combination Therapy of SCY-078 with Voriconazole in Patients with Invasive Pulmonary Aspergillosis (SCYNERGIA)	Since May 2020
A Phase 3, Multicenter, Randomized, Double-Blind Study of the Efficacy and Safety of Rezafungin for Injection Versus the Standard Antimicrobial Regimen to Prevent Invasive Fungal Diseases in Adults Undergoing Allogeneic Blood and Marrow Transplantation (RESPECT)	Since Jan 2021
A Phase 2, Open-Label Study to Evaluate the Safety and Efficacy of APX001 in the Treatment of Patients with Invasive Mold Infections Caused by <i>Aspergillus</i> Species or Rare Molds APX001-202	Since Feb 2021
A Phase 3, Multicenter, Randomized, Double-blind Study of the Efficacy and Safety of Rezafungin for Injection versus Intravenous Caspofungin Followed by Optional Oral Fluconazole Step-down in the Treatment of Subjects with Candidemia and/or Invasive Candidiasis (RESTORE)	Since May 2021
An open-label single-arm Phase IIb study of F901318 as treatment of invasive fungal infections due to <i>Lomentospora prolificans</i> , <i>Scedosporium</i> spp., <i>Aspergillus</i> spp., and other resistant fungi in patients lacking suitable alternative treatment options (FORMULA)	Since Jun 2021

YoungECMM

"The program is expected to provide a global community for scientists early in their career working in human and veterinary medical mycology."

Rosanne Sprute, MD

Danila Seidel, PhD

Under the direction of members of the ECMM EC Cologne, the YoungECMM program is currently being set up. The program is expected to provide a global community for scientists early in their career working in human and veterinary medical mycology, from laboratory-based scientists to clinicians.

Several benefits and resources will apply to members, including publication and travel awards, opportunities to participate in the YoungECMM social program at the TIMM congress, and the privilege to submit to the

journal *Mycoses* with two reviews that have been obtained prior submission.

A subcommittee for the YoungECMM Program will consist of four members, two of whom will be from the ECMM Excellence Center in Cologne (Chair: Rosanne Sprute, Treasurer: Danila Seidel). It is planned to introduce the YoungECMM program at the ECMM Council Meeting in Aberdeen in October 2021.

YouTube Channel "IDIM - Infectious Diseases in Motion"

"Social media are crucially important in today's world."

Jon Salmanton-García, PhD

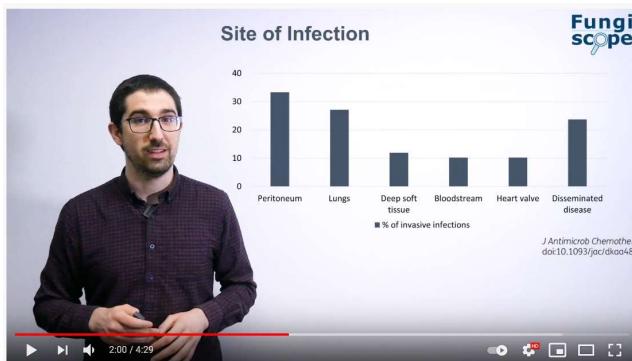

Social media are crucially important in today's world. A great portion of internet users rely on social media on a daily basis and numbers are ever increasing. Apart from videos directed at the general public, our Excellence Center creates videos for professional audiences and clinicians in the field of infectious diseases. These videos are prepared based on the recent publications from our team or collaborative teams and provide a summary of the respective publication (Table 1).

How important these videos are for clinicians was demonstrated in Covid-19 Associated Mucormycosis (CAM) in India and

neighbouring countries. While the number of fatal fungal infections affecting Covid-19 patients was rapidly increasing, there were serious misconceptions about CAM in the lay press, which reflected the need for correct information from reliable sources. Our Excellence Center prepared multiple videos on the topic of Mucormycosis that got attention among clinicians in the countries dealing with CAM. Our Excellence Center also contacted the presidents of the hematology societies of Bangladesh, Bhutan, India, Pakistan, and Sri Lanka to accelerate the dissemination of these videos more efficiently among local networks in these countries.

Example of an IDIM video

YouKu Channel

"Since YouTube is not publicly available in China, YouKu serves as an important information channel [...]."

For our international outreach, we try to leverage social media to a maximum in order to extend our audience to as many countries as possible. Whereas our YouTube channel reliably provides information for Europe, YouTube is not publicly available in China. There is a platform similar to YouTube called YouKu in China for Asian users. YouKu (Chinese 优酷, Pinyin yóukù "excellent and cool") is a video portal based in Beijing in the People's Republic of China. YouKu allows users to upload videos regardless of their length. With the exception of the "Investor

Relations" area, the website is exclusively in Chinese. At the beginning of 2010, the portal had 384 million users according to the China Network Information Centre (CNIC). This number shows how popular YouKu is and that it is worthwhile using the platform. Our YouKu account currently contains 17 videos from FungiScope®. Through YouKu FungiScope® keeps its partners and target groups in China up to date. Our YouKu account was created in 2020. The University of Cologne Regional Office in Beijing, China is instrumental for this service.

ECMM Consulting Service

"EC Cologne played a coordinating role in founding the ECMM Expert Consultation Service to provide expert help [...]."

Difficult to treat invasive fungal infections require prompt consultation of an infectious diseases expert to improve treatment outcome and increase survival rates. The ECMM EC Cologne played a coordinating role in establishing the ECMM Expert Consultation Service which provides expert help free of charge for medical centers around the globe seeking advice. The ECMM Expert Consultation Service provides recommendations and broad expertise on difficult-to-treat invasive fungal infections (e.g., azole-resistant *Aspergillus* species, *Candida auris*, mucormycosis etc.) to improve the diagnostic and therapeutic management and hence outcomes. The expert consult collaborates and networks with other appointed ECMM ECs that represent an integral part of the service. Our

initiative aims for a global outreach through video conferencing between ECMM Excellence Centers and treating physicians. FungiScope® registries are used to structure case information and to evaluate the impact of the collegial advice system at regular intervals. The advice given follows recent guidelines and EQUAL Scores are being used to measure guideline adherence. Infectious diseases expert consultation should be an integral component of care for patients with difficult-to-treat invasive fungal infections. The ECMM Expert Consult addresses this need at a global scale.²¹ Since 2017 the ECMM EC Cologne has provided expert guidance through 300 local, 150 national and 70 international consultations.

COVID-19 Associated Mycoses

"With the support of the ECMM the EC Cologne was among the first to report COVID-19 associated mycoses."

With support of the ECMM EC Cologne several series were published on COVID-19 associated mycoses.^{22,23}

Aspergillus

SARS-CoV-2 causes direct damage to the airway epithelium enabling *Aspergillus* invasion.²⁴ The - to our knowledge - first ever published report of COVID19 associated pulmonary aspergillosis (CAPA) has raised concerns about worsening the disease course in COVID-19 and increasing mortality.²⁵ In addition, the first cases of CAPA caused by azole-resistant *Aspergillus* have also been reported. The ECMM EC Cologne served as lead in developing the 2020 ECMM/ISHAM consensus statement on defining and managing CAPA. This consensus statement was prepared and endorsed by experts from several other medical mycology societies.²⁶ Our aim was to provide definitions for clinical research and up-to-

date clinical management recommendations on the diagnosis and treatment of CAPA. Three different grades were proposed (i.e., possible, probable, and proven CAPA) to enable researchers to homogeneously classify patients in registries and interventional clinical trials. The "possible" category was implemented due to the fact that, so far, diagnostic bronchoscopy in patients with COVID-19 has played a minor role due to its nature of aerosol generation and high risk of viral transmission²⁷ Besides, the testing of the retrieved specimens lacks validation.²⁸ Over time, new insights will help to further improve the definitions and the management algorithms.^{26,29}

Candida

Invasive infections with *Candida* spp. are increasingly recognized as a complication in

critically ill COVID-19 patients, but knowledge on this fungal superinfection is

sparse. Well-designed epidemiologic studies are needed to define the true burden of disease and to identify key factors of invasive candidiasis in patients with COVID-19. To evaluate epidemiology, relevant predisposing factors, performance of diagnostic tools, treatment option and outcome of this fungal complication, we will collect > 500 COVID-associated candidiasis cases and perform a retrospective analysis.

Mucormycosis

COVID-19 associated mucormycosis (CAM) has become an increasing health threat in India and neighbouring countries making it to prime-time news in early 2021. Uncontrolled diabetes, the liberal use of corticosteroids and COVID-19 associated immune response modulations are factors predisposing for rhino-orbital cerebral mucormycosis. CAM was sporadically reported from other countries, but a comprehensive overview on predisposing factors, clinical manifestation and outcome of COVID-19 patients with mucormycosis was lacking. Initiated by the ECMM and ISHAM, patients with the respective diagnosis were identified through the FungiScope®, ECMM and ISHAM networks.

Data will be collected via an electronic case report form in the FungiScope® *Candida* registry, which was designed as a platform for international cooperation to improve research on invasive *Candida* infections.³⁰ With this study, we aim to understand the full extent of candidiasis in the setting of severe COVID-19 and to determine the best management for affected patients.

FungiScope® supported the effort by collecting relevant clinical information of published and unpublished cases diagnosed in April 2021 or earlier.³¹

Only a few cases of CAM have been reported in Europe, so that robust figures on incidence and prevalence of CAM are not available up to now. Therefore, a European survey has been developed to map distribution of cases across Europe. The ECMM and FungiScope® networks were activated to collect data on prevalence and clinical information on individual patients. This initiative is still ongoing. The campaign for CAM cases in Germany was spearheaded by the FungiScope® team.

Fungus-reactive T Cells

"The lack of reliable in vitro diagnostics (IVD) delays diagnosis and treatment and limits epidemiological knowledge."

Invasive fungal infections (IFI) caused by Aspergillus, Candida and Mucorales are with a cause of substantial mortality. Acute myeloblastic and acute lymphoblastic leukaemia (AML/ALL) patients and allogeneic haematopoietic stem cell (HSCT) recipients are at high risk of IFI due to prolonged neutropenia and administration of glucocorticosteroids and immunesuppressants. The lack of reliable in vitro diagnostics (IVD) delays diagnosis and treatment, and limits epidemiological

knowledge. In our lab we use fungus-reactive peripheral blood T-cells to identify pathogens via the specific immune response to Aspergillus and Candida species and Mucorales. Fungus-specific T-helper cells sensitively react to changes in fungus-host interaction and lead antifungal immunity which can be monitored. We also use this technique to diagnose and follow-up on patients with hepatosplenic candidiasis.

Capacity Mapping of Africa and Asia

[...] Both continents have to face not only the threat of endemic mycoses, but also the reduced access to health and social support systems."

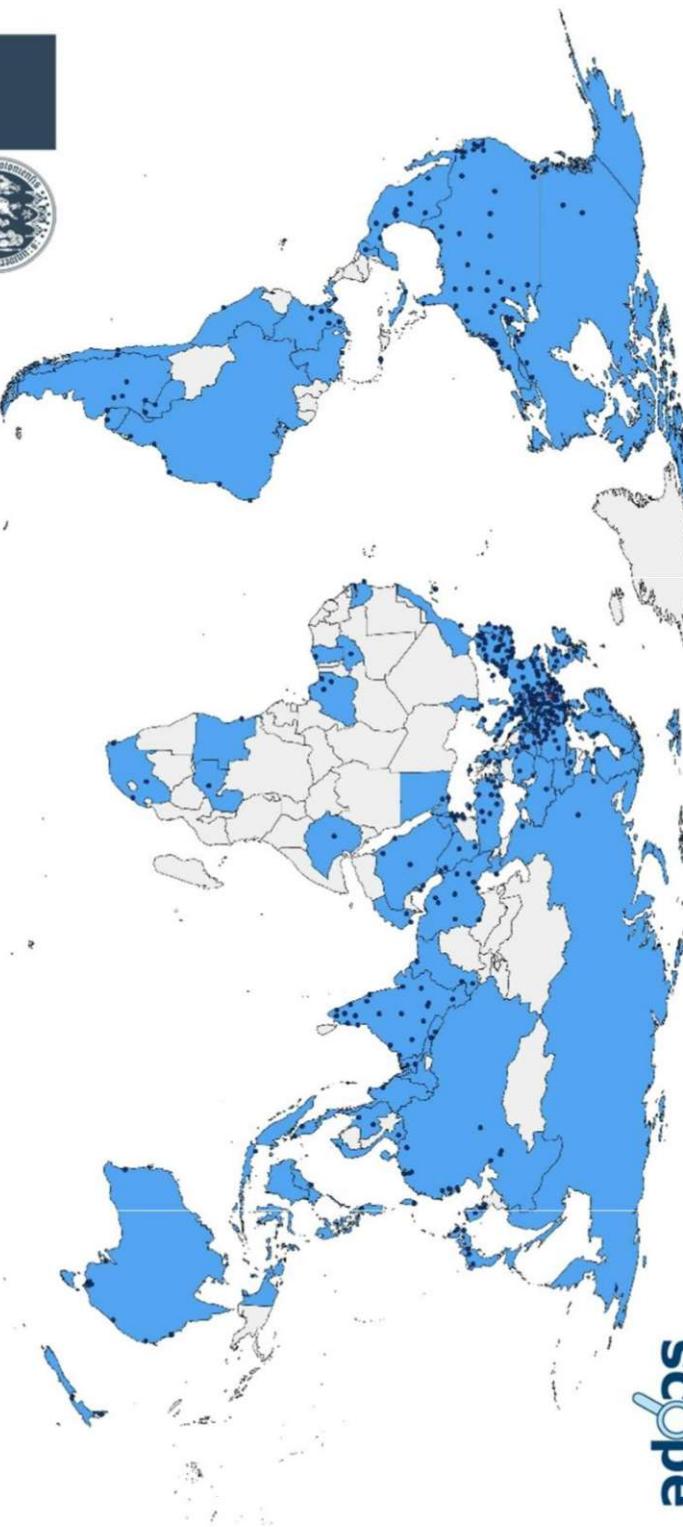

Jon Salmanton-García, PhD

Today, Africa and Asia are home to up to three quarters of the world population,³² with climate conditions that predispose for invasive fungal infections (IFI). In addition to mycoses reported in other parts of the world,^{13,33-36} large regions on both continents not only face the threat of endemic mycoses,³⁷ they also suffer from limited access to health care and social support systems, along low income,³⁸ a substantial amount of people living in rural areas,^{39,40} or a substantial number of individuals with comorbidities predisposing to IFIs.^{4,41-44} In this joint initiative of ECMM and ISHAM, the main goal is to depict the current IFI diagnostic capacity for Africa and Asia via an online questionnaire accessible via www.clinicalsurvey.net. Different aspects regarding the IFI diagnostic procedures are

displayed, such as a) perceptions on IFI in the respective institution, b) microscopy, c) culture and fungal identification, d) serology e) antigen detection f) molecular tests or g) therapeutic drug monitoring (TDM). Experts in medical mycology (directors, infection control practitioners, professors, attending physicians and infectious diseases specialists or laboratory professionals) are approached via email and social media (LinkedIn, Twitter) in order to obtain answers from as many sites as possible. We also solicit feedback from every single region in each of the countries. Currently, the outcome from the African survey is under review in *The Lancet Microbe*, whereas the data collection for Asia is on-going as of September 9th, 2021.

Curriculum Vitae of the Principal Investigators

Prof. Dr. med. Oliver A. Cornely MD, FECMM, FAAM, FIDSA, FACP

CECAD Cluster of Excellence – University of Cologne
University Hospital of Cologne, Department I for Internal Medicine
Kerpener Str. 62, 50937 Cologne, Germany
Phone: +49 221 478-85523; E-mail: oliver.cornely@uk-koeln.de; <https://tinyurl.com/cornelylab>

Education, Career History & Professional Experience

Since 2014	University Professor (W3), Director & Chair Translational Research Institute, CECAD (Cluster of Excellence in Cellular Stress Responses in Aging-associated Diseases), University of Cologne
Since 2014	Scientific Director, Clinical Trials Center Cologne (CTCC)
2008-2014	Associate Professor
2007-2014	Medical Director, Clinical Trials Center Cologne (CTCC), University of Cologne
2006	Board Certification Infectious Diseases
2005	Board Certification Hematology and Oncology
2001	Board Certification Internal Medicine
1999	Board Certification Emergency Medicine

Main Research Activities and Achievements

2020	Highly Cited Researcher, Top 1% in Web of Science
2019	Academic Advisor, National Fungal Diseases Surveillance Net (NFD-Net), China
2018	Consultant, WHO Global Antimicrobial Resistance Surveillance System (GLASS) Program for Global Resistance Development
2018	British Medical Association Book Award for the Oxford Textbook of Medical Mycology
2018	Highly Cited Researcher, Top 1% in Web of Science
2014	Prof. Pushpa Talwar Memorial Oration, Postgraduate Institute, Chandigarh, India
2009	Faculty Prize for Outstanding Publication of the Year 2007 – Faculty of Medicine, University of Cologne, Germany

PD Dr. med. Philipp Köhler MD, FECMM

University Hospital of Cologne, Department I for Internal Medicine
Kerpener Str. 62, 50937 Cologne, Germany
Phone: +49 221 478-85523; E-mail: philipp.koehler@uk-koeln.de

Education, Career History & Professional Experience

- 2021 Habilitation / postdoctoral qualification
- 2021 Board Certification Infectious Diseases
- 2020 Board Certification Intensive Care Medicine
- 2019 Board Certification Internal Medicine, Hematology and Oncology
- 2019 Fellow of the European Confederation of Medical Mycology (FECMM)
- 2018 Board Certification Emergency Medicine
- 2013 Medical thesis
- 2012 Medical licence / approbation
- 2006-2012 Medical studies

Main Research Activities and Achievements

- 2019 Young Investigator Award 2019 for Clinical Mycology of the German-speaking Mycological Society e. V.
- 2018 British Medical Association Book Award for the Oxford Textbook of Medical Mycology

Publications of the ECMM EC Cologne 2017 - 2021
